EDUCATION

University of Texas at Austin

May 2028

Bachelor of Science in Statistics and Data Science, Mathematics | Minor in Computer Science

Coursework & Concepts: Data Structures and Algorithms, Probability, Distributed Systems, Operating Systems, Databases, Cloud Computing, Microservices/APIs, ETL/ELT Pipelines, GRPO, RL, SFT, RAG, MoE, LLM Evals

EXPERIENCE

Workday

May 2026 – Aug 2026

Machine Learning Engineering Intern

Pleasanton, CA

- Engineered features for Workday's Self-Service Agent that uses 60+ tools to answer questions and execute workflows
- Standardized ~250 LangChain evaluations, boosting agent completion to 92% by fixing tool-selection and node errors
- Designed a LangGraph recommendation system to generate clickable follow-ups, used 8.6K times per month by clients
- Built a parallel fan-out/fan-in node architecture, overlapping a 1.25s LLM call to meet production p95 latency target

University of Texas at Austin – IDEAL Lab

Sept 2025 – Present

Machine Learning Undergraduate Researcher

Austin, TX

- Research under Prof. Joydeep Ghosh and Shijun Li on RL-trained LLM recommenders with adaptive retrieve evidence
- Co-authored RRCM, which trains Qwen3-1.7B with GRPO to decide whether to query user histories or item metadata
- Designed 8 reward systems for Qwen3-1.7B, raising relevant recommendations from 16.6% to 27.3% over baseline
- Ran verl with Slurm on TACC, tuning group size, batch size, and gradient accumulation for rollout throughput

Briq

Jun 2025 – Aug 2025

Software Engineering Intern

Remote

- Developed and deployed integration tests across 10+ microservices for an AI-powered invoice processing platform
- Automated REST API validation with Postman, verifying 100+ document payloads, cutting QA time by 60%
- Reduced release rollbacks 20% through Git CI/CD pipeline optimizations that improved deployment reliability

Innoflexion

May 2025 – Jul 2025

Machine Learning Engineer Intern

San Francisco, CA

- Led two interns to develop a feature in DeepRoot, a platform that prepares enterprise data for GenAI use cases
- Developed an MoE architecture that routed structured and unstructured data across 30+ LLMs/SLMs with vLLM
- Formulated Data Readiness Index framework that evaluated quality, structure, security, and fairness of input data

PROJECTS

StrikeRL | Python, MuJoCo/MJX, JAX, Brax (PPO)

July 2026

- Built an end-to-end deep RL pipeline for contact-rich humanoid soccer control on MJX with GPU-parallel Brax PPO
- Trained a target-conditioned policy to a 100% directional hit rate (5cm mean error) across a $\pm 25^\circ$ target arc
- Scaled to a 17-DOF standing humanoid with a multi-term balance reward, striking at 5.3 m/s within 9cm of target

Recurse | Python, MCP, CLI, Ollama, Qwen 3.5, Docker, YAML

May 2026

- Localized MCP using Recursive-Language-Models(RLM) to extend Claude CLI context window by 10M+ tokens
- Built a sandboxed multi-model pipeline with memory, codebase navigation tools, and custom RLM modifications

LEADERSHIP

Technology Consulting Group

May 2025 – May 2026

Project Director

Austin, TX

- Networked with F500 companies, startups, and local businesses securing 20+ projects for consultants and advisors
- Worked with non-technical stakeholders to translate difficult business questions into data-driven recommendations

ADDITIONAL SKILLS

Programming Languages: Python, R, SQL, C++, Java

Technologies: PyTorch, TensorFlow, Transformers, scikit-learn, CUDA, vLLM, LangChain, LangGraph, LangSmith, FAISS, JAX, MuJoCo/MJX, Brax, NumPy, Pandas

Tools/Frameworks: Airflow, Spark, PostgreSQL, MongoDB, Neo4j, ChromaDB, Docker, AWS, GCP, Git, W&B

Awards: Eagle Scout(2023), 2nd Place Cisco BridgeHacks Hackathon (2024), HackTX Finalist (2025)
